

Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	3 october 2026
Team ID	SWTID-2026-6064
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Standard Laptop Request	User can access the Service Catalog and select the Standard Laptop service. User can place a laptop procurement request using Order Now .
FR-2	Request Approval	System records the submitted request. Request can be reviewed by the approver. Approved requests proceed to the automated workflow.
FR-3	Automated Catalog Task Creation	Flow Designer is triggered after the service request process. System automatically creates a Catalog Task for the approved laptop request. Task short description is updated to " Laptop need to Configured ".
FR-4	Hardware Task Assignment	System automatically assigns the Catalog Task to the Hardware assignment group. Hardware team receives the task for laptop configuration.
FR-5	Request and Task Status Tracking	User/IT team can view the request number and requested item. Catalog Task status can be checked after task creation. Task details display the updated short description and assigned group.

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	The ServiceNow Service Catalog provides a straightforward process for users to select the Standard Laptop service and place a request. Automation reduces the amount of manual interaction required from users and IT staff.
NFR-2	Security	The procurement workflow uses the ServiceNow approval process so that laptop requests are processed only after the required approval. The workflow runs using the configured ServiceNow platform access and permissions.
NFR-3	Reliability	Flow Designer provides a consistent automated process for creating the Catalog Task and assigning it to the Hardware group, reducing the possibility of manual task-assignment errors.
NFR-4	Performance	Automation reduces manual processing time by automatically creating and assigning the configuration task after approval, helping the Hardware team begin configuration promptly.
NFR-5	Availability	The workflow is implemented within the ServiceNow platform, allowing the Service Catalog and automated workflow to be accessed through the platform when the service is available.
NFR-6	Scalability	The automated workflow can process standard laptop requests using the same defined Flow Designer process, reducing the need for manual intervention as the number of requests increases.
