Define the Problem Statements

Date	31 January 2025
Team ID	SWTID-2026-6064
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	2 Marks

Customer Problem Statement Template:

Create a problem statement to understand the customer's point of view. The Customer Problem Statement helps the team focus on the challenges faced by the customer and identify opportunities for improvement.

For our project, the customer is an **employee requesting a standard laptop**, while the IT procurement and Hardware team are responsible for processing, configuring, and delivering the laptop.

I am	<i>Describe customer with 3-4 key characteristics – who are they?</i>	I am the IT procurement team member responsible for managing standard laptop orders.
I'm trying to	<i>List their outcome or "job" the core about - what are they trying to achieve?</i>	I am trying to streamline the laptop procurement process and automate the creation of configuration tasks so that laptops are ready for users without manual effort.
but	<i>Describe what problems or barriers stand in the way – what bothers them most?</i>	The current process is manual and inefficient, with delays in configuration, oversights, and lack of automation, leading to user frustration and inefficient resource allocation.
because	<i>Enter the "root cause" of why the problem or barrier exists - what needs to be solved?</i>	There is no automated workflow to create a catalog task, update the short description, and assign it to the hardware team after approval of the service request.
which makes me feel	<i>Describe the emotions from the customer's point of view - how does it impact them emotionally?</i>	I feel frustrated and overwhelmed due to delays, manual intervention, and the risk of configuration errors, which affects the overall user experience and IT productivity.

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	An employee requesting a standard laptop	Get my laptop configured and ready on time	The configuration task may be delayed or overlooked after approval	The current process involves manual task creation and assignment	Frustrated and concerned about the waiting time
PS-2	An IT procurement team member	Ensure every approved laptop request reaches the Hardware team	every approved laptop request reaches the Hardware team Configuration assignment	Manual intervention can cause delays and inefficient resource allocation	Overloaded and concerned about missed or delayed tasks manual processing and

Customer Problem Statement – PS-1

I am an employee requesting a standard laptop.

I'm trying to get my laptop configured and ready for use on time.

But the configuration task may be delayed or overlooked after my request is approved.

Because the current process requires manual task creation and assignment.

Which makes me feel frustrated and concerned about the waiting time.

Customer Problem Statement – PS-2

I am an IT procurement team member.

I'm trying to ensure that every approved Standard Laptop request is quickly assigned to the Hardware team for configuration.

But configuration tasks require manual processing and assignment.

Because the existing process has limited automation and can result in delays or missed tasks.

Which makes me feel overloaded and concerned about inefficient resource allocation.

Key Problem Identified

Approved Standard Laptop requests need an automated process that creates a Catalog Task and assigns it to the Hardware team for configuration.

Proposed Direction

Service Catalog → Approval → Flow Designer → Create Catalog Task → Hardware Assignment → Laptop Configuration
